Summary

Full Stack Software Engineer with 2+ years delivering production-grade web applications and AI-driven backend systems. Designs scalable REST APIs, integrates LLM and Cortex AI agents, and owns Docker + Nginx deployments across FastAPI, React, and TypeScript. Pairs strong CS fundamentals with LLM APIs and AI-assisted development (Claude, GitHub Copilot) to ship reliable software quickly. Targeting Backend / Full Stack / AI Engineer (SDE-1) roles.

Experience

Associate Software Engineer — Accenture

Oct 2024 – Present

AI Ops Dashboard

- Architecting a real-time observability dashboard (React, TypeScript, FastAPI) that surfaces LLM usage, latency, token spend and telemetry across Snowflake, reducing manual analysis ~30%.
- Engineering FastAPI services with direct Snowflake connectivity through async I/O and caching, improving response time ~25%.
- Owning deployment end-to-end, containerizing services with Docker and Nginx for reproducible releases.

SQL Debugger

- Developing an AI-assisted SQL debugging tool (FastAPI, React) with three analysis tiers, reaching ~75% accuracy and cutting manual debugging ~40%.
- Migrating the analysis engine from external LLM calls to an internal Cortex AI agent for secure access to internal tables.
- Handling deployment through a containerized Docker and Nginx pipeline.

Full Stack Developer Intern — Ekalavya (A Fourth Rev Edu)

May – Aug 2024

- Shipped the “Circulars” feature for an ERP platform (Node.js, TypeScript, REST APIs) for institutional notice management.
- Added unit and API testing with Vitest and Swagger, strengthening backend reliability through clearer API contracts and documentation.

Projects

PDF Reader — Document Q&A | React.js, TypeScript, TailwindCSS, LangGraph, FastAPI *(in progress)*

- Building a document Q&A app that ingests uploaded PDFs and answers natural-language questions over their content.
- Orchestrating a LangGraph RAG pipeline with chunking, embeddings and vector search for grounded, context-aware responses.

75 MM — Movie Ticket Booking | Vue.js, TypeScript, Node.js, MySQL, Knex.js | GitHub: [Frontend](#) · [Backend](#)

- Built a full-stack movie booking app with secure JWT access/refresh authentication and Pinia state management.
- Designed a responsive Vue.js + Vuetify frontend over a Node.js + MySQL backend, structured as separate repos.

QR-Based Attendance System | JavaScript, Node.js, Bootstrap

- Built a QR-based attendance web app with separate faculty and student logins.
- Designed real-time scanning of a projected QR code to reduce proxy attendance and malpractice.

Education

Maharaja Vijayaram Gajapathi Raj College of Engineering

B.Tech, Computer Science & Engineering

Coursework: Operating Systems, DBMS, Computer Networks, DSA, Cloud Computing

2020 – 2024

GPA: 8.60/10

Certifications

NPTEL Cloud Computing | CPA: Essentials in C++ | PCAP: Python | CCNav7 | NPTEL Soft Skills

Skills

Languages: Python, C++, SQL, JavaScript, TypeScript

Backend: FastAPI, Node.js, REST API Design, Async I/O, JWT Auth

Frontend: React.js, Vuetify, TailwindCSS, Bootstrap, HTML5, CSS3

Databases: PostgreSQL, MySQL

DevOps: Docker, Nginx

Testing & Tools: Vitest, Swagger, Unit Testing, Git
